Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/note="Vector: PWD42nv; Purified genomic DNA from M. musculus C57BL/6J (male) was obtained from the Jackson Laboratory Mouse DNA Resource (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gi|4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

/note="Vector: PWD42nv; Purified genomic DNA from M. musculus C57BL/6J (male) was obtained from the Jackson Laboratory Mouse DNA Resource (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gi|4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

  TITLE     Direct Submission
  JOURNAL   Submitted (10-DEC-2000) Trypanosoma brucei genome sequencing
            project, Sanger Centre, The Wellcome Trust Genome Campus, Hinxton,
            Cambridge CB10 1SA, E-mail: barrell@sanger.ac.uk and
            nh1@sanger.ac.uk
COMMENT     Constructed at the Institute for Genomic Research (TIGR),
            Rockville, MD. Genomic DNA isolated from a cloned population of
            Trypanosoma brucei (TREU927/4 GUTat 10.1) was mechanically sheared
            to give a tight size distribution (
            4 kb).  The v + i method used for the library construction is
            described in detail in Smith, H. and Venter, J.C. (Making small
            insert libraries for whole genome shotgun sequencing projects.  In
            Genome Sequencing: A Practical Approach, eds. M. Vaudin and B.
            Barrell, Oxford University Press, 1999).
            Email: nelsayed@tigr.org
            Details of T. brucei sequencing at the Sanger Centre are available
            at http://www.sanger.ac.uk/Projects/T_brucei/.

PT New CadC-fusion polypeptide nucleic acid constructs
XX
PS Example; Page 83; 123pp; English.
XX
CC This sequence represents a PCR primer used in the construction of a
CC CadC-fusion polypeptide.
CC The invention relates to CadC-fusion polypeptide nucleic acid constructs,
CC which are used to transform cells to produce systems for identifying
CC compounds which modulate interactions between protein sequences. The
CC CadC-fusion polypeptides comprise a periplasmic domain, a transmembrane
CC domain and a CadC transcriptional regulatory domain. Cells transformed
CC with nucleic acid encoding the fusion proteins and a cadBA reporter
CC construct can be used for identifying compounds which modulate a specific
CC protein-protein interaction such as modulation of interactions between
CC protein sequences involved in receptor interactions, e.g. dimerisation.
CC Such methods can be used for identifying ligands for orphan receptors.
CC The system is extremely sensitive in that background is low and the

CC magnitude of signal background is quite robust, such that even minor
CC modulations in protein-protein interactions are readily detectable.

PT Polynucleotides comprising polymorphic variants of a reference sequence
PT for tumour necrosis factor receptor 1 (TNFR1), useful for studying the
PT biological function of TNFR1 and identifying drugs targeting the
PT protein for treating disorders -
XX
PS Example 1; Page 31; 79pp; English.
XX
CC The present invention relates to polymorphic variants of the tumour
CC necrosis factor receptor 1 (TNFR1) gene. The sequence of the gene is
CC given in AAA95102, AAA95103 and AAA95104. The polymorphisms were
CC identified by amplifying and sequencing regions of the gene. Twelve
CC polymorphic loci were discovered. Of these twelve polymorphisms, four can
CC cause a change in the TNFR1 protein. The present sequence is a primer
CC used to amplify part of the TNFR1 gene. The TNFR1 polymorphisms may be
CC useful for studying the biological function of TNFR1 as well as for
CC identifying drugs targeting the protein for treatment of disorders
CC related to its abnormal expression or function such as tumours,
CC apoptosis related disorders and bacterial infection.

PT Identification modulatory elements of functional protein interaction
PT for use in determining biological activity of the protein and for
PT treating diseases -
XX
PS Example 6; Page 78; 104pp; English.
XX
CC The patent discloses methods for determination of protein function and
CC identifying modulators. This involves use of tagged dominant negative
CC element (TDNE) that interferes with the interaction between a target and
CC a partner protein comprising expressing TDNE in a microbial cell,
CC measuring reporter gene expression and comparing the level to a
CC expression level obtained in the absence of TDNE. The TDNEs are used in
CC gene therapy and in screening for modulators. This is used for treating
CC metabolic, proliferative, or endocrine disorders like diabetes, obesity,
CC porphyria, phenylketonuria and arrhythmias. The present sequence is
CC XbaI primer, used for amplification of tumour necrosis factor (TNF)
CC alphaR extracellular domain (ECD) fragments, D1-V84 and D1-L154. The
CC amplified products can be used to produce MalE fusion plasmids.

PT Antisense inhibition of tumor necrosis factor type 1 expression for
PT diagnosis, treatment and prevention of disease, particularly tumors -
XX
PS Example 14; Column 28; 34pp; English.
XX
CC The invention provides antisense compounds targeted to human tumour
CC necrosis factor receptor type 1 (TNFR1) RNA. These antisense compounds
CC can be used in a method of inhibiting the expression of TNFR1 human cells
CC or tissues. The antisense compounds specifically hybridize with one or
CC more nucleic acids encoding TNFR1 modulating the function of nucleic
CC acid molecules encoding TNFR1, ultimately modulating the amount of TNFR1
CC produced. The antisense compounds and method are useful as research
CC reagents and diagnostics, and in the treatment and prophylaxis of
CC infection, inflammation or tumour formation. The present sequence
CC represents a probe hybridising to the human TNFR1 DNA.

PT   New phospho:di:esteric oligo:nucleotide(s) - which exert a specific
PT   and selective cytotoxic effect on tumour cells, for treating both
PT   solid and liquid tumours
XX
PS   Claim 10; Page 5; 38pp; English.
XX
CC   Novel phosphodiesteric oligonucleotides AAT93811-27 are based on the
CC   generic formula, in the 3'-5' or 5'-3' direction:
CC   (GaTa')a''-(GbTb')b''-(GcTc')c''-(GdTd')d''-(GeTe')e''-(GfTf')f''-
CC   (G-gTg')g''-N', where:
CC   N and N' = T or G, equal or different from each other;
CC   x = 0-8, equal or different from each other;
CC   a, b, c, d, e, f, and g = 0-10, equal or different from each other;
CC   a', b', c', d', e', f', and g' = 0-30, equal or different from each
CC   other;
CC   a'', b'', c'', d'', e'', f'', and g'' = 1-16, equal or different from
CC   each other;
CC   The oligonucleotides are believed to selectively bind and sequester
CC   some proteins which are essential to the viability and growth of
CC   tumoural cell line. They have specific and selective cytotoxic activity
CC   against tumour cells, and can be used for treating tumours of the liquid
CC   type, in particular of lymphoblastic origin, and of solid type, in
CC   particular lymphomas. The present phosphodiester oligonucleotide, at a
CC   concentration of 15 micromolar, reduced growth of CCRF-CEM tumoural
CC   cells by 78%, which is detectable 48 hours after administration.

PT   New insoluble proteins, and fragments, that bind to tumor necrosis
PT   factor, used to treat e.g. septic shock or cerebral malaria
XX
PS   Example 11; Page 16; 25pp; German.
XX
CC   This invention describes novel homogeneous insoluble proteins (I),
CC   their (in)soluble fragments (Ia) and their salts that can bind tumour
CC   necrosis factor (TNF). The products of the invention have
CC   anti-inflammatory and antimalarial activity. (I) and (Ia) are used (i)
CC   to treat diseases in which TNF is involved (e.g. septic shock, autoimmune
CC   glomerulonephritis, cerebral malaria, immune responses and inflammation),
CC   (ii) to purify TNF, (iii) to identify TNF (ant)agonists and (iv) for
CC   diagnostic determination of TNF in body fluids. Antibodies raised against
CC   (I) are used for affinity purification of (I). This sequence represents
CC   a PCR primer used in the amplification of the TNF binding protein of the
CC   invention.

PT   New homogeneous, insoluble proteins that bind tumor necrosis factor
PT   (TNF), useful for treating TNF-mediated disorders, e.g. inflammation -
XX
PS   Example 11; Page 16; 26pp; German.
XX
CC   This invention describes novel insoluble proteins (I), also their
CC   (in)soluble fragments and pharmaceutically acceptable salts, able to bind
CC   tumor necrosis factor (TNF) and in homogeneous form. The products of the
CC   invention have antiinflammatory, immunosuppressive, antibacterial,
CC   antiprotozoal activity. (I), and related recombinant proteins, are used
CC   to treat diseases mediated by TNF, e.g. shock in cases of meningococcal
CC   sepsis; development of autoimmune glomerulonephritis and cerebral
CC   malaria. Also (I), or antibodies specific for them, are used for
CC   diagnostic determination of TNF in body fluids, for affinity purification
CC   of TNF and for identifying (ant)agonists of TNF. This sequence represents
CC   a PCR primer used in the amplification of the human 55 kD TNFBP described
CC   in the method of the invention.

PT Promoter sequence of the p55 TNF receptor - is used to diagnose
PT mutations in the promoter region which contribute to pathology of
PT diseases
XX
PS Disclosure; Column 3; 14pp; English.
XX
CC This sequence represents a probe for the isolation and sequencing of
CC the 5' flanking region of the p55 tumour necrosis factor receptor
CC (TNF-R) gene. This isolated fragment was found to have promoter
CC activity, shown by its ability to drive expression of the CAT reporter
CC gene in both human HeLa cells and mouse A9 cells. Deletion constructs
CC of this clone showed that promoter activity was confined to a 150 bp
CC BglII-EcoRI fragment which included most of the transcription start
CC point. Further analysis showed that a minimal promoter of 70 bp still
CC exhibited activity. S1 nuclease digestion analysis of the RNA of the
CC HeLa and U 937 cells with DNA probes indicated multiple start sites of
CC transcription. It was found that the promoter sequence resembles
CC promoters of house-keeping genes, eg. hypoxanthine phosphoribosyl-
CC transferase, EGF receptor, NGF receptor or the p55 IL-1 receptor. It
CC is devoid of a TATA box and of a CCAAT motif and is relatively rich in
CC G/C in its 3' end. There is an even higher content of G/C residues in
CC the proximally located, 5' end of the first intron. This region is also
CC rich in the dinucleotide couple CpG, which may allow for differentiation-
CC related changes in the promoter activity as a function of the extent of
CC methylation of these nucleotides.

PT Antisense inhibition of tumor necrosis factor type 1 expression for
PT diagnosis, treatment and prevention of disease, particularly tumors -
XX
PS Example 14; Column 28; 34pp; English.
XX
CC The invention provides antisense compounds targeted to human tumour
CC necrosis factor receptor type 1 (TNFR1) RNA. These antisense compounds
CC can be used in a method of inhibiting the expression of TNFR1 human cells
CC or tissues. The antisense compounds specifically hybridize with one or
CC more nucleic acids encoding TNFR1 modulating the function of nucleic
CC acid molecules encoding TNFR1, ultimately modulating the amount of TNFR1
CC produced. The antisense compounds and method are useful as research
CC reagents and diagnostics, and in the treatment and prophylaxis of
CC infection, inflammation or tumour formation. The present sequence
CC represents a primer for amplifying the human TNFR1 DNA.
